

GLiNTECH's IBM-Enabled Integration Architecture Workshop

What is GLiNTECH's IBM-Enabled Integration Architecture Workshop?

Whether responding to competition, upgrading systems to support growth, or complying with new regulatory requirements, adapting and/or maintaining rigid integration infrastructures is a constant challenge.

Service-Oriented Architectures (SOA) enable firms to respond more effectively to change by reducing integration project and maintenance costs through the reuse of service components. Getting started requires a deeper understanding of SOA standards, principles and best practices.

GLiNTECH's IBM-Enabled Integration Architecture Workshop is designed to help you understand current SOA best practices and apply these to your business processes and integration challenges.

We offer this workshop to customers who are actively interested in applying the concepts of SOA to their environment, especially as it relates to integration and the creation of new integrated solutions.

Benefits

The WebSphere Integration Architecture Workshop provides you with a better understanding of SOA and IBM product capabilities in the context of your business challenges and environment.

Key benefits of the workshop include:

- ▶ Education on SOA best practices and emerging techniques and technologies
- ▶ Documented technical solutions to your business problems
- ▶ Discovery of solution requirements and issues through facilitated IT and line of business discussions

Workshop Activities and Deliverables

The WebSphere Integration Architecture Workshop is a two or three day educational and problem-solving work session at your site. During the workshop we share our experience with successful SOA implementations and apply this to your business requirements. During the workshop we:

- ▶ Review your business goals, objectives and key initiatives
- ▶ Review your existing IT architecture, applications portfolio, and service components
- ▶ Identify business integration and BPM challenges
- ▶ Discuss industry standards, emerging technologies and SOA best practices
- ▶ Review IBM's SOA Reference Architecture
- ▶ Explore solution and SOA alternatives
- ▶ Develop high-level solution architecture
- ▶ Document workshop findings including existing and recommended solution components mapped to IBM's Reference Architecture

Engagement Process

- ▶ Meet with our consultants for an initial discussion to scope requirements
- ▶ Qualified engagements will proceed to workshop stage
- ▶ Workshop duration and cost are dependent on client requirements
