

# APPLICATION DEVELOPMENT END-TO-END VISIBILITY

## Knowing your stage of maturity and measuring your application development is key to achieving end-to-end visibility.

GLiNTECH's *Future of Software Development in Australia 2011/12* survey highlighted a reoccurring concern of participants: traceability, communication and visibility between the developers and business; in other words end-to-end visibility. Furthermore, our research has shown that no matter what development methodology and application tools you chose, consistent gaps in these areas can still exist. Measuring and resolving these gaps has formed the essence of our undertaking.

### Knowing your stage of maturity ❖

Your application development maturity is derived from how effectively your organisation manages people, systems and process while continuously analysing and optimising outcomes.

At GLiNTECH we have an Application Development Maturity Assessment. This assessment helps our consultants work out where there are gaps in your application development's end-to-end visibility.

Derived from best practice associated with CMMI (Capability Maturity Model Integration) principles, GLiNTECH have adapted our approach specifically for application development. We use a five levelled scale to map the current state of an organisation's application development maturity.

Knowing your stage of maturity is key to understanding where you can make improvements.

### Measuring your application development ❖

Application Development measures should target the key areas of end-to-end visibility; traceability, communication and visibility. In 2011, Gartner reported that most organisations don't measure their application development and those that do, don't measure all of the following:

- Traceability and root cause
- Output/throughput
- Effectiveness
- Efficiency
- Project/task status

GLiNTECH can help by reviewing your application development end-to-end visibility, highlighting gaps and most importantly helping your teams use the metrics effectively to continuously analyse and optimise outcomes. The net result is an evolution of your application development maturity.

Traceability, communication and visibility are the main concerns of developers and their managers: findings of GLiNTECH survey 2011

GLiNTECH

## The ADM Discovery Workshop ❖

GLiNTECH's proven success in our engagements shows we understand the needs of varying application development teams and want to share our findings, independent of any current consulting engagement. Our ADM workshop includes our Application Development Maturity Assessment which reviews your approach to tooling, knowledge and process measurement metrics.

After a short workshop, you will have:

- A snapshot of your current state of Application Development Maturity
- An assessment of various systematic areas associated with application development
- Clear definition of where you would like to mature
- A roadmap of quick wins
- An outline of strategic areas to evolve and suggested metrics

GLiNTECH has been priming projects and supplementing project teams for over ten years. Our involvement has spanned four continents, a variety of industry verticals, emerging and leading technology, languages and methodologies. We understand and excel in development practices.

## GLiNTECH Client Testimonials ❖

Whether you need a team to develop a new application, expert strategic advice for governance or require an implementation strategy, GLiNTECH is able to successfully fulfil your software technology needs.

***"Communication by the GLiNTECH team with the State Library was seamless throughout the project. They always delivered on time despite a tight production schedule, while meeting or exceeding all our expectations - a superb achievement."***

**~Project Manager, State Library of NSW**

***"Nokia expects the implementation of the open source solution by the GLiNTECH development team to reap major benefits for both Nokia and its customers, driving efficiency and further improving our customer care capability."***

**~Customer Care Manager, Nokia Australia**

***"We engaged GLiNTECH for their experience in the design and delivery of integration projects such as these. They delivered on time and within budget"***

**~ Managing Director, AWA Technology Services**

## About GLiNTECH

GLiNTECH provide software development and implementation services for Enterprise clients. We specialise in Integration + SOA, and how these inform Portal, Collaboration and BPM solutions. GLiNTECH approach each engagement by assessing and recommending the right technology mix. We pragmatically select the best consultants, software and infrastructure for delivery and implementation.
