

HipChat Data Center

Self-hosted enterprise chat, built for teams

High availability: Chat without interruptions

Is downtime unacceptable in your organization? Engineered for high availability, HipChat Data Center, allows teams to collaborate without interruption.

Active-active clustering

Run multiple nodes for uninterrupted communications even in the event of a hardware failure.

Load balancer

With your own load balancer, you can control the data that is sent to the multiple nodes of HipChat Data Center to help ensure that your users won't experience any downtime.

Scale: Chat that grows with your organization

Teams that work together should be able to communicate and collaborate on a single platform. With HipChat Data Center, you can deploy HipChat across your entire organization, eliminating silos and ensuring strong cross-functional communication, accelerating your team's workflow.

Increase user capacity

Scale beyond 5,000 users and deploy HipChat across your

organization so that your employees can communicate using one platform.

Control: Chat that you can customize and control

Do you need control over where your software is deployed? HipChat Data Center allows you to control your chat to meet legal and Information security needs.

Use your own disaster recovery & backup strategies with externalized data stores

With HipChat Data Center's externalized data stores, companies can employ their existing enterprise-grade disaster recovery and backup strategies.

Bring your own IaaS

HipChat Data Center allows you to deploy using VMware or AWS, providing administrators with an additional layer of control over the deployment and management of HipChat.

SAML 2.0

Save time, ensure data consistency, and gain greater visibility by shifting identity management from HipChat Data Center to your existing identity provider, where you already manage your users and the applications they can access.

Extend your Atlassian suite with HipChat Data Center

Bitbucket

Stay on top of changes to your code repository in HipChat. Pipe in updates about commits, pull requests, and issues from any device.

JIRA Software

Keep tabs on all of your issues in HipChat. Get notified in a HipChat room when your JIRA issue goes through a particular workflow.

Confluence

Connect Confluence spaces with HipChat rooms to keep everyone on your team informed. Receive notifications when pages are created, blogs are published, or updates are made.

Bamboo

Get notifications when a build passes or fails, when you are assigned responsibility for breaking a build, and for many other notification events.

Other benefits

Video

Sometimes it's faster to get things done face-to-face. HipChat lets you video chat with a group (up to 20 teammates) or an individual teammate. Start and join video chats from HipChat rooms or 1-to-1 chats.

Screen sharing

Easy to use and quick to start, HipChat screen sharing helps teams share ideas and make decisions faster. From any video chat, click one button to share your screen or window.

HipChat Connect

Bring the tools that run your business into HipChat. Leverage HipChat Connect to leverage or build rich integrations with your existing Atlassian products, internal systems and 3rd party applications.

Pervasive communications

Teams are more productive with pervasive chat history in 1-1 and group chat conversations. Granular control on each room's chat history allows your organization to meet its data retention requirements.

File sharing

Got a file that your team needs to see? Be smart and share it in HipChat. Your teammates will see it straight away, plus it'll be accessible later from the chat history.
